1) I paired up with Lamzaouri – (Driver)

2) As the navigator, I found pair programming fun. As a navigator, I led Lamzaouri into completing the problem-solving task (Fibonacci). I gave him prompts and we both came together to find an easy solution to the problem through decomposition and abstraction. I've learnt that working with others during programming is fun as we play off each other's strength well. Coding is more straightforward when working with others.

3) I liked the dynamic formed between my partner and I as it helped us both achieve the task by bouncing ideas off each other. No dislikes from me personally.

4) Potentially more activities involving others, in other words more paired programming to make the sessions fun
